

What's Due Canvas?

Ricardo Castellanos
Youssef Elzein
Victor Flores
Rizwan Vazifdar

How did we decided on this project?

- Initially we wanted to build an extension that merges canvas calendar with google calendar
- We realized there is value in being able to see what's due on Canvas at the click of a button

Who are our users?

- Anyone who has a Canvas account
- Not limited to Universities
- Educational programs
- Clubs may also use Canvas

Why is our software valuable?

- Convenient
- Faster than navigating to Canvas
- Serves as a reminder
- Alivates paranoia of missing something important

What has been built?

- User enters their school name and Canvas token
 - This info is persistent through different Firefox instances and tabs
- At the click of a button, all Canvas assignments are displayed
- The assignments are also stored in local storage

How was it built?

- Initially used a node module for fetching assignments
- Switched to Canvas and fetch API
- Each assignment stored has an ID to prevent duplicates

Changes made since last update

- Added more information for each assignment
- Stored assignments locally
- Added styling and loading animation

Potential Future

- Marking assignments
- Styling to separate/hide completed assignments
- Moving domain and token to settings menu

Live Demo
